

2025 Biosafety & Biosecurity Month

Are your non-lab workers aware of Lab Hazards?

To enhance the value of your research, provide simplified and relevant training to your non-laboratory support staff, who may need to enter the laboratory as part of their job responsibilities.

Do they...

- ✓ Have hazard communication/awareness training?
- ✓ Know basic hygiene and contamination control?
- ✓ Know which personal protective equipment (PPE) to use?
- ✓ Know restricted areas and unsafe behaviors/work practices?
- ✓ Know the facility emergency response procedures?
- ✓ Understand the meaning of warning signs, labels, and door placards?
- ✓ Know how to report incidents, injuries, and illnesses at work?
- ✓ Know how to report safety concerns (no fault or blame)?
